1.

Install FileZilla Server on your Windows machine, create a user account, and set up a shared folder for FTP access.

ANS:-

FileZilla FTP Server Setup:

- Steps:
    1. Install FileZilla Server on the Windows machine.
    2. Create a new FTP user account with a username and password.
    3. Create/select a shared folder for FTP access.
    4. Give the user permission to access the shared folder.
- Result: FileZilla Server was configured successfully with a user account and a shared folder for FTP access.

2.

Use FileZilla Client to connect to your FTP server using the credentials you created, and upload any image file from your computer to the shared folder.

ANS:-

Upload File Using FileZilla Client:

- Steps:
    1. Open FileZilla Client and enter the FTP server credentials.
    2. Connect to the FTP server using the created username and password.
    3. Select an image file from the computer.
    4. Upload the image to the shared folder.

- Result: The image file was uploaded successfully to the shared FTP folder.

3.

Download the uploaded file from your FTP server to a different folder on your computer using FileZilla Client, and verify the file size matches the original.

ANS:-

Download and Verify File:

- Steps:
    1. Open FileZilla Client and connect to the FTP server.
    2. Select the uploaded file from the shared folder.
    3. Download it to a different folder on the computer.
    4. Compare the file size with the original file.

Result: The downloaded file size matched the original file size, confirming that the file was transferred successfully.

4.

Research and list 3 real-world scenarios where SNMP is used in network management for apps or services you use (such as ISPs, campus WiFi, or large websites). Hint: Think about how network admins monitor device health, bandwidth, or uptime.

ANS:-

Real-World Uses of SNMP:

Scenario	How SNMP is Used
ISP Network	Network admins monitor routers for bandwidth usage and device health.
College Wi-Fi	SNMP helps monitor access points for uptime and network performance.
Large Websites	Admins monitor servers and network devices to detect failures and high traffic.

5.

Create a table comparing FTP and HTTP across at least 5 points: port number, security, data transfer method, use cases, and authentication.

ANS:-

FTP vs HTTP:

Point	**FTP**	**HTTP**
Port Number	21	80
Security	Less secure by default	Less secure by default; HTTPS provides encryption
Data Transfer	Mainly used for file transfer	Mainly used for web pages and web data
Use Cases	Uploading and downloading files	Browsing websites and accessing web content
Authentication	Supports username and password	Usually uses web-based login or other authentication methods
