**1.** Draw a simple diagram (hand-drawn or digital) showing how your phone connects to Instagram, including your device, WiFi router, ISP, and Instagram server. Label each part and the connections.

**ANS:-**

---

**2.** List 5 devices you use or see daily that are part of a network (for example: smartphone, smart TV, WiFi router, laptop, smartwatch). For each, write what type of network it connects to (LAN, WAN, PAN, etc.).

**ANS:-**

**Five Devices That Are Part of a Network**

| No. | Device | Type of Network | Explanation |
|---|---|---|---|
| 1 | Smartphone | WAN / WLAN | Connects to the internet through mobile data or Wi-Fi. |
| 2 | Laptop | LAN / WLAN | Connects to other devices and the internet through a Wi-Fi router or Ethernet. |
| 3 | Smart TV | WLAN | Connects to Wi-Fi to stream videos and movies. |
| 4 | Wi-Fi Router | LAN | Connects multiple devices within a local network. |

| | | | |
|---|---|---|---|
| 5 | Smartwatch | PAN | Connects to a smartphone using Bluetooth. |

**3.** Explain the difference between the Internet and an intranet using an example from your college or a public WiFi you have used.

**ANS:-**

| **Internet** | **Intranet** |
|---|---|
| A global network accessible to the public. | A private network used within an organization. |
| Anyone with an internet connection can access public websites. | Only authorized users can access it. |
| Example: Google, Instagram, and YouTube. | Example: A college's internal student portal. |

Example from college: When I use college Wi-Fi to access Google, I am using the internet. When I log in to a college-only internal portal to check attendance or examination records, I am using an intranet if the portal operates on the college's private network.

**4.** Pick any one app you use (like WhatsApp, Zomato, or Flipkart) and describe, in 4-5 lines, how data travels from your device to their server and back when you perform a search inside the app Hint: Mention the devices and networks involved, and what happens when you hit 'search'.

**ANS:-**

**How Data Travels When Searching in WhatsApp**

1. I open WhatsApp on my smartphone and type a name or keyword into the search bar.
2. My phone sends the search request through Wi-Fi or mobile data to the internet.
3. The request travels through my Internet Service Provider (ISP) to WhatsApp's servers.
4. The server processes the request and sends the relevant search results back through the internet and my network.
5. My smartphone receives the response and displays the matching messages or chats on the screen.
